

Problem-Solution Fit

Date	26 June 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

1. CUSTOMER SEGMENTS  - Banks and Financial Institutions - Credit Card Applicants - Loan/Credit Verification Officers	2. PROBLEMS / PAINS  - Manual verification takes a long time. - Human errors during approval. - Large number of applications. - Inconsistent approval decisions.	3. TRIGGERS TO ACT  - Need faster approval process. - Reduce operational cost. - Improve customer satisfaction. - Increase prediction accuracy.	4. EMOTIONS (BEFORE / AFTER)  Before: Delays, uncertainty, frustration. After: Faster approvals, confidence, reliable decisions.	5. CURRENT ALTERNATIVES  - Manual document verification. - Rule-based approval systems. - Traditional banking process.
6. CUSTOMER LIMITATIONS  - Limited financial history. - Incomplete applicant information. - Different income sources. - Large number of applications.	7. BEHAVIOR  - Customers expect instant approval. - Banks process thousands of applications daily. - Need secure and accurate decisions.	8. CHANNELS  Online: - Flask Web Application - Bank Website Offline: - Bank Branches - Customer Service	9. ROOT CAUSE  - Manual evaluation process. - Human dependency. - Time-consuming verification. - High operational workload.	10. OUR SOLUTION  - Machine Learning-based Credit Card Approval System. - Flask Web Application. - Logistic Regression. - Decision Tree. - Random Forest. - Gradient Boosting. - Real-time prediction with an easy-to-use interface.
