

Code-Layout, Readability and Reusability

Date	30 June, 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the Credit Card Approval Prediction project code in terms of structure, readability, maintainability, and reusability. The project is developed using Python, Flask, and Machine Learning techniques. Proper coding standards, modular programming, and meaningful documentation make the application easy to understand, maintain, and extend for future enhancements.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform indentation and spacing maintained throughout the Python code.	Yes	Improves readability and debugging.
2	Proper File Structure	Files are organized into templates, static, model, dataset, and application folders.	Yes	Follows Flask project structure
3	Meaningful Variable Names	Variables such as income, gender, own_car, family_members, prediction, and employed_days clearly indicate their purpose.	Yes	Easy to understand
4	Function / Method Names	Functions such as home (), predict_page (), and result () are descriptively named and improve code readability.	Yes	Enhances maintainability.
5	Code comments	Important sections contain comments explaining preprocessing, model loading, and prediction logic.	Yes	Helps future developers.
6	Modular Design	The project separates model training (Jupyter Notebook) and web deployment (Flask application), improving modularity and maintainability.	Yes	Highly reusable.
7	No Redundant Code	Duplicate code has been minimized by using reusable functions.	Yes	Cleaner implementation.

8	Error Handling	Invalid user inputs and prediction errors are handled using exception handling.	Yes	Prevents application crashes.
---	----------------	---	-----	-------------------------------

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technology	Where Used	Reusability Level (High / Medium / Low)
1	Flask Web Application	Flask, HTML, CSS	User Interface	High
2	Feature Encoding Module	Scikit-learn	Dataset Preparation	High
3	Machine Learning Model	Decision Tree / Random Forest / Gradient Boosting / Logistic Regression	Prediction System	High
4	HTML Templates	HTML/CSS	User Interface	High

Overall Code Quality Assessment:

Aspect	Rating(1-5)	Comments
Code Layout & Structure	5	Well-organized project directory following Flask architecture.
Readability	5	Meaningful variable names, proper formatting, and comments improve readability.
Reusability	5	Modular functions and reusable ML components allow future enhancements.
Documentation / Comments	5	Well-structured code with meaningful comments, modular organization, and reusable components makes the application easy to maintain and extend.
Overall Score	5/5	Excellent code quality with proper structure, readability, and maintainability.
