

No. of Functional Features Included in the Solution

Date	30 June, 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Functional Features Overview

This document lists all the functional features implemented in the Credit Card Approval Prediction project. Each feature contributes to automating the credit card approval process using Machine Learning and a Flask web application.

Functional Features

S.No	Feature Name	Feature Description	Module / Component	Status (Done / in progress / Pending)	Marks Contribution
1	Applicant Data Input	Accepts applicant details through a web form.	Flask UI	Done	High
2	Data Preprocessing	Cleans the dataset, performs Label Encoding, and prepares features for model prediction.	Data processing	Done	High
3	Credit Card Approval Prediction	Predicts whether an application is Approved or Rejected.	Prediction Engine	Done	Medium
4	Model Integration	Loads the trained model (credit_card_model.pkl) and label encoders into the Flask application using Joblib.	Backend	Done	Medium
5	User-Friendly Web Interface	Displays prediction results instantly through an interactive web page.	Frontend	Done	Medium

Feature Summary:

Metric	Count / value
Total Features Planned	5
Total Features Implemented	5
Core / Must-Have Features	Applicant Data Input, Data Preprocessing, Label Encoding, Machine Learning Prediction, Flask Integration

Additional / Nice-to-have Features	Responsive User Interface, Joblib Model Serialization, Exception Handling
Features Tested & Verified	5 Features Successfully Tested

Feature Category Breakdown

S.No	Category	Features in Category	Example Feature
1	User Interface(UI)	2	Applicant Information Form, Prediction Result Page
2	Backend / Logic	3	Data Preprocessing, Prediction Engine, Error Handling
3	Database / Storage	1	Dataset Management and Pickle Model Storage
4	API / Integration	1	Flask Integration with Machine Learning Model
5	Security / Authentication	1	Input Validation and Exception Handling
